Physical Layer Monitoring & Control

Shop This System Online

Get visibility, security and control of your physical layer environment

Monitor your entire hybrid cloud and IT infrastructure from a cloud-based, integrated dashboard.

The A150 System provides 24 x 7 x 365 physical layer environment infrastructural monitoring, control and management service and systems for hybrid cloud and hybrid IT for consistency, network security and compliance requirements.

The A150 System has been specifically designed and developed for Data Center / IT Room / Confidential Lab operators to meet the demand for physical layer environment network security, energy conservation, and remote management – now and into the future.

Find Out More About the A150 System

100 Percent Wireless

Meshed wireless sensor network architecture. Wireless reliability, data speed and power consumption. Supporting hundreds of sensors simultaneously.

Real-Time Monitoring

All historic data, warnings and alarms are saved in cloud servers for future records and analysis.

Small Devices

Maintenance free, ultra long battery operating life. Reliable, Redundant, Resilient. Flexible, scalable, simple installation with no service interruption.

3D Visualizations

By monitoring in-rack conditions with a unique 3D visualization, data center and mission critical facility managers can improve their operational security and effectiveness with no infrastructural change.

Reduce Energy Usage

Keep your data center's power consumption at a minimum while saving over thousands of dollars with our new innovative technology. Our solution is environmentally friendly and still affordable. Save more than 20% energy from your data center.

Alarm and Warning Notification

User defined warnings and alarms are sent via text messages and/or emails and also saved for future analysis.
